

REAL TIME WEIGHING FOR TRUCKS AND TRAILERS.

LOAD MORE, INCREASE YOUR PROFITS!

BRT⁴

TRACKWEIGHT™
BRT 4 ONBOARD TRUCK WEIGHING SOLUTIONS

TRACKWEIGHT IS PROUD TO PRESENT ITS BRT 4 ONBOARD SCALE

Truckers are required to comply with legislation governing on-road freight transportation. Some of this legislation sets out mandatory rules that specify the maximum axle loads allowed for each type of trucks and semi-trailers on the road.

Our BRT 4 scale was created out of a desire to help truckers prevent truck weight overloads and optimize transportation operations. The BRT product line has made a name for itself in many countries due to the quality and simplicity of its digital displays.

Weighing is done automatically by means of sensors installed on the truck axles or air suspensions. Depending on the type of truck, the BRT monitor measures flex in the beam suspensions in real time and displays the total weight by axle group. Fitting your truck or semi-trailer with an onboard BRT 4 scale is a simple operation. You can do it yourself or have it installed by one of our specialists.

Display options set by user

The load sensors (air or mechanical) are installed on the suspensions (air, spring or beams) and send weight data to the BRT 4 in real time.

Fresh new look,
works the same way!

Printer available

The TrackWeight advantage

- Proven accuracy and durability for 20 years!
- Limited 3-year warranty on parts
- Thousands of BRT scales installed

Features

BRT 4

Truck type displayed	Yes
Backlighting	Self-adjusting
12 to 24 VDC power	Yes
Air and mechanical sensors	Yes
Dimensions (inches)	7.6" X 3.6" X 1.3"
Limited 3-year warranty on parts*	Yes
Designed and manufactured in Canada	Yes
Exterior load indicator lights	Optional
Thermal printer	Optional

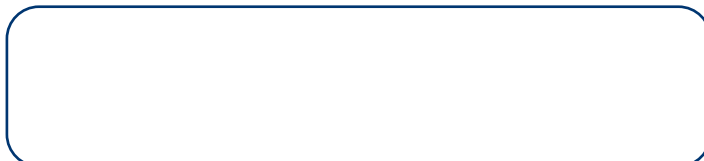

Accuracy, Durability and Innovation

We understand that efficiency is a key factor to succeed. Inside each TrackWeight product, electronic components are industrial grade only and must respect tight specifications sustaining the toughest temperature and vibrations conditions. We design our own mechanical sensor and also use high-end air, loadcell and angle sensors to best fit your truck suspensions and application.

The Power of People

Our team is passionate about its work and elevates each product feature to give the best experience to truck drivers. When ideas and suggestions are brought to our attention, it has all our consideration. We build products for customers, not for us. We think differently and this is what gives TrackWeight a unique approach to onboard weighing for trucks and trailers.
