## PRODUCTIVITY <sup>+</sup><sub>+</sub>

### APPLICATION PROFILE

#### Contractor:

ACI Inc.  
Joliette, Quebec

#### Application:

Asphalt grinding for  
road rebuilding

#### Equipment:

Wirtgen WR 2400  
TRACK-VISION  
TRV-1000-2-115  
wired backup safety  
camera system

## ABOUT TRACK-VISION™

### TRV 1000-1-115

Specifically designed for  
heavy equipment

#### Kit includes:

- 1 x 7" LED color monitor
- 1 x 115° Wide angle camera
- 1 x Hood cover
- 1 x 52' heavy duty armored cable
- Patented lens technology:  
darkening/lightening in accordance  
with lowlight/sunlight exposure
- Camera tested to withstand a  
high pressure 15L/minute washer  
flow of 80 bars at 80 °C
- 115° wide angle viewing
- "sees" better in the dark than  
the human eye!
- Nitrogen-filled, 100% watertight
- Shock proof and vibration resistant
- Aluminum casing with integrated  
sun cover
- Heated lens surface to prevent  
condensation or frost
- Salt spray tested

**Warranty: 3-year full replacement  
warranty on camera and 2-year  
warranty on monitor.**

**Kits also available for 2, 3 and 4  
camera systems**

## TRACK-VISION™ on Wirtgen WR 2400 prevents damage and saves costs on grinder teeth.

Congested traffic and hidden obstacles are just part of life on road construction sites, but contractors are learning how today's heavy-duty safety back-up cameras make life better!

Rear-view Camera

Mill-view Camera

### Safety, speed, precision

On the WR 2400, one camera is set immediately above the milling rotor, showing the operator exactly where the cutting edge is working. This camera turns the 58,000 lb. mill into a precise cutting instrument as the operator can maneuver up tight to manhole covers, curbs and other surface features without risking damage to the equipment or features.

The WR 2400 mounts one camera high up on the rear beam of its chassis, giving the operator a close-in, wide angle view of the jobsite behind him.

The high resolution monitor switches easily between the rear-view and the tool-view.

Job-rated TRV-1000 cameras allow fast, accurate milling around road features and obstacles.

## TRACK-VISION takes the shakes!

TRV-1000 cameras stand up to the toughest road work – even the **heavy vibrations**, the dust and the grit of asphalt milling! TRACK-VISION camera systems are specially built for total reliability in every equipment fleet:

- Shockproof, vibration resistant
- 100% watertight (even vs. high pressure washing)
- Heated lens prevents condensation and frost
- RF-shielded cabling
- Salt spray tested
- Superior resolution in low light

## Get all your equipment out of the tightest spots!

TRACK-VISION cameras and monitors are the rugged, reliable solution for every road-building application. Count on RMT to help you improve the productivity and safety of:

- Wheel Loaders
- Compaction Rollers
- Excavators
- Dozers
- Motor Graders
- Pavers
