

RMT Launches Connected Cab Filtration – A First in Canada!

Blainville, May 2, 2025 – RMT Equipment, a recognized leader in weighing, vision, and detection technologies, is proud to announce a strategic partnership with **BMair International BV**, a European leader in pressurized air filtration systems for heavy machinery cabs.

A New Advanced Air Filtration Solution for Heavy Equipment Operator Safety

Thanks to this alliance, Canadian dealers and businesses now have access to **high-performance filtration solutions** specifically designed to **protect operators** from fine particles, silica, toxic vapors, and other contaminants in the **harshest work environments**.

“With their commitment and deep understanding of the Canadian market, RMT is the ideal partner to advance safety on job sites,” says Robbert Boersma, Director Business Development & OEM at BMair.

A Key Solution for High-Risk Industries

Whether in **excavation, decontamination, demolition, recycling, or quarry operations**, these work environments can expose operators to serious respiratory risks—often undetected until years later. BMair systems, equipped with **HEPA and activated carbon filters**, ensure **clean and safe air inside the cab** while **meeting the strictest health and safety standards**.

“Our mission at RMT is clear: protect workers while optimizing operations. Adding BMair to our product lineup allows us to take that mission even further,” says Marc Lefebvre, President of RMT.

Smart Filters with Internet Connectivity for Uncompromised Safety

All BMair filters are equipped with **RFID chips** that ensure accurate and automatic identification, guaranteeing the correct filter is used for each machine. Each system also includes **free 5G cellular connectivity**, sending **real-time email alerts** when a filter needs to be replaced.

This industry-unique connectivity elevates safety to a whole new level by **preventing critical oversights**. A filter that isn't replaced on time can jeopardize an operator's health—this is why BMair relies on **connected technology**.

The **BMair Connect** platform enables:

- Remote **monitoring of filter status** with no manual intervention;
- **Efficient maintenance planning**;
- **Real-time access to diagnostic data**, including turbine performance.

BMair systems are now available through RMT's distribution network across Canada. To learn more, visit www.rmtequip.com or contact your local RMT expert.

About RMT Equipment

RMT brings 27 years of expertise in precision, safety, and telematics. A North American leader in the installation and distribution of productivity, visibility, and detection systems—designed specifically for heavy equipment, transport, and material handling. These solutions are cutting-edge and field-proven. RMT's commitment to its clients is backed by a strong team and a robust North American distribution network. With thousands of projects completed, the RMT team will help you get the most out of your equipment.
